# Site Map

Sitemaps are organized lists or flow chart diagrams that shows connections between web pages, web page trees, and website content. A visual sitemap is a very effective method for both planning and communicating ideas about a website's structure. As a 2D representation of a website, sitemaps allow designers and developers to efficiently plan website projects by offering a bird's-eye view of the entire project at one time.

---

Your sitemap should look something like this:
- HOME
  - Services
    - Service 1
    - Service 2
  - About Us
    - Our History
    - About Our CEO
  - Contact Us

Once we have created the sitemap, we will then work on individual pages.  Content will be written and images selected.  This is how we will build the site, page-by-page.  Interactive features – such as Contact Us, Photo Galleries, etc – will be built to best utilize the content and images you provide.  We will also work with you on how the content will best look on the page as well as ensuring that your site uses proper Search Engine Optimization techniques.

Use the space below to draw your sitemap or create one however you like.  Use pen, pencil, colors, symbols.  Whatever you want to help organize your data.  You can scan and email it back to us at info@masseymedia.com.
